To: Analytics <analytics@wfrc.org>

Hi spoke a bit more with Laura Zemp and her colleague Mike Palica at the Utah State Higher Education (USHE) office about getting an extract of the public college/university enrollment data.

Here's what Laura and Mike indicated that they could provide --

For each 5 digit zip code in Utah, the number of FT and PT students attending on-campus classes for each institution where:

- data is for statewide for Fall semester 2019 (we can share with UDOT, and other MPOs)
- home zip codes not matching 84* to be removed
- 'online only' attendees to be removed
- concurrent enrollment high school students taking college classes onsite at their high schools are thrown out, but 15% of concurrent enrollment students that attend PT on campus classes will be kept as PT students
- students that attend on-campus class at two campuses of the same institution will be reported as PT student associated with each campus they attend
- we may need to do some 'fitting/exclusion' to discount the presence of some cases where a student's home location has not been updated from a previous residence...but apparently students are presented with a 'update your current address' popup at registration each semester
- USHE will keep the query so it can be rerun for consistency when we want updated data.

They are under the gun for a few other projects. They believe they can deliver this data to us by the end of the month but set August 7th as a conservative goal.

If you think we need to have a followup meeting or exchange prior to their data delivery, let me know and I set up a followup meeting for those who are interested.

Thanks,
Bert
